EDUCATION

University of Virginia (3.69/4.00 GPA | Dean's List)

Charlottesville, Virginia

Bachelor of Science in Computer Science | Data Science Minor

Aug 2022 – May 2026

- **Relevant Coursework:** Data Structures and Algorithms, Software Development Essentials, Computer Systems and Organizations, Reinforcement Learning, Natural Language Processing, Object-Oriented Programming, Software Engineering, Cloud Computing

WORK EXPERIENCE

University of Virginia Main Library | AWS, Lambda, JavaScript, IT Support, Project Management

Charlottesville, Virginia

Transformational Student Intern

Aug 2025 – Dec 2025

- Developed and deployed **AWS Lambda** functions in **JavaScript** to support workflows around the library's system and **AWS** environment.
- Selected by management for strong technical and interpersonal skills to serve as the primary POC between library staff and technical teams, bridging communication gaps and shaping a sustainable long-term internship model.
- Engaged in mentorship and project coordination with the department head manager to align priorities through Jira projects.

NRECA | AWS, Python, Kubernetes, Lambda, DevOps, ArgoCD, C#, .NET

Arlington, Virginia

Cloud Platform Engineer Intern

May 2025 – Aug 2025

- Developed and deployed **AWS Lambda** functions in **Python** that retrieved and processed encrypted data from **AWS SSM** to detect misconfigurations, generating actionable alerts for downstream teams.
- Experienced utilizing, building, and testing reusable applications, allowing feasible adoption by teams and quicker product delivery (e.g., **AWS SAM** for IaC deployments).
- Transitioned API Gateway CloudFormation templates to **AWS CDK**, reducing technical debt and improving onboarding speed for teams managing APIs.
- Demonstrated leadership skills by leading cross-team collaboration and utilized existing resources to identify and resolve blockers early, conduct unit testing, and implement a foundational solution for a large-scale automation project projected to streamline developer workflows company-wide.

Umee | Flutter, AWS, Amplify, DynamoDB, Agile

Remote

Backend Developer

Oct 2024 – Jan 2025

- Developed in an agile start-up environment, implementing tools like **AWS AppSync** for GraphQL APIs with real-time **DynamoDB** processing to create a mobile application using **Flutter**.
- Integrated AWS Cognito authentication system using **Amplify CLI**, ensuring scalable and secure user management.
- Hands-on experience with various AWS services including **EC2** for computing resources and **S3** buckets for object storage.

SKILLS & TECHNICAL TOOLS

Languages: Python, Java, JavaScript, HTML/CSS, C, Typescript, GDScript, JSON, C++, R, Dart, .NET, C#

Technologies: React, Flask, Git, Bootstrap, Godot, MATLAB, Linux, Unity, Three.js, SQL, TensorFlow, NumPy, Pytorch, React Native, AWS, PostgreSQL, DynamoDB, Amplify, Flutter, Node, Docker, Kubernetes, Powershell

Soft Skills: Communicative, Team-oriented, Active Listener, Attention to detail, Time Management, Leadership, Collaborative, Proactive

PROJECTS

Book Cataloging Website | Python, Django, PostgreSQL, AWS, Heroku, DevOps, CI/CD

Group Project

Jan 2025 – May 2025

- **Python** web application built with Django and PostgreSQL that allows users to catalog their books.
- Served as DevOps Engineer; implementing CI/CD pipelines and managed process via Heroku and utilized AWS S3 for file storage.

Speech Emotion Detector | Python, OpenAI, Machine Learning, Data Cleaning

Group Project

Oct 2024 – Dec 2024

- Utilized trained BERT models (fine tuned on the GoEmotions dataset) and demonstrated to a class with over 60 students on the **OpenAI's Whisper API** speech sentiment recognition (Python application)

Acne Product Recommender | React Native, Typescript, REST API, NumPy, PostgreSQL, AWS

2024 PatriotHacks Project

Oct 2024

- Built a mobile application that detects acne using a YOLO11 and NumPy-based recognition model (90% average accuracy) and recommends skincare products aligned with user results.
- Utilized React Native for front-end mobile development, **OpenAI** for comparing acne results with skincare products, and PostgreSQL with AWS to host database organization to allow autonomous model calling.
- Configured **REST APIs** to automate the process of image uploading to **AWS S3** buckets for file storage.

BoardBlueprint | React, Typescript, Python

Personal Project

Mar 2024 – Apr 2024

- Developed a comprehensive data platform leveraging React and **Typescript**, designed to aggregate and display keyboard prices, specifications, and images from premier retailers.
- Implemented a web-scraping program with **Python** and BeautifulSoup4 to dynamically parse data from keyboard sites into structured JSON files, emphasizing innovative problem-solving and automation skills.
